PROFILE

Final-year engineering student in Mathematical Engineering and Modeling (ENSGMM, Benin), focused on cybersecurity, networks and Linux systems. Completed a two-month network and systems administration internship in 2026. I build and secure systems in lab environments, validate every control with a test in both directions (access granted and access denied), and document results and limits. I am also learning about AI applied to security. Looking for an internship or junior role in security operations (SOC), network and systems security, or Linux administration.

EXPERIENCE

Network & Systems Administration Intern · FusionSoft Labs, Parakou, Benin — Jul 2026 – Sep 2026

- Hardened a **simulated** production Linux server (Docker container) in 7 days against a written specification (RPO 24 h, RTO 30 min): key-only SSH, root login disabled, default-deny UFW, nightly GPG-encrypted backups with 7-day rotation. **Full restore verified with diff, completed in minutes.**
- Kept a web service available with supervisord (restart in under one second after kill -9) and investigated a simulated incident (logins, scheduled tasks, Nginx logs), concluding with evidence that the server had not been compromised.
- Built a department-isolated file server for 4 departments and 7 accounts: Unix groups, SGID, POSIX ACLs, an **idempotent** Bash provisioning script, Samba shares; validated with cross-department tests and an SMB client (access granted / NT_STATUS_ACCESS_DENIED).
- Designed and configured six networks in Cisco Packet Tracer: VLANs and 802.1Q, inter-VLAN routing (Router-on-a-Stick, SVI), static/RIPv2/OSPF, VLSM, extended ACLs, port security, DHCP snooping, DAI. Capstone: an 8-segment headquarters (/22 sized for 196 devices + 50% growth) linked to 2 branches over WAN.

PROJECTS

Cassandra vs PostgreSQL (group project, 3 students) · ENSGMM — Oct – Nov 2026

3-node Cassandra 5.0 cluster in Docker (RF = 3): QUORUM read succeeded with one node down. Ten-year benchmark (17.5 M rows): reads flat at 3–5 ms, 2,504 vs 305 writes/s, 349 MB vs 1,755 MB on disk.

TCP port scanner in Rust · github.com/AGRO-Rachidi/port-scanner-rust — 2026

Three successive versions (sequential, threads with mpsc channels, async Tokio with a semaphore) and a written analysis of memory/speed trade-offs.

Python for security · github.com/AGRO-Rachidi/cybersecurity-python-journey — Since Oct 2026

Log-analysis scripts: IPv4 extraction and classification (ipaddress module), TXT/JSON/CSV reports, error handling; public learning log.

EDUCATION

Engineering degree programme, Mathematical Engineering & Modeling · ENSGMM – UNSTIM · Abomey, Benin — 2024 – present (final year)

École Nationale Supérieure de Génie Mathématique et Modélisation, Université Nationale des Sciences, Technologies, Ingénierie et Mathématiques. Statistics, stochastic processes, optimisation, databases (SQL, NoSQL/Cassandra), parallel programming (MPI).

Engineering preparatory classes (CP1–CP2) · INSPEI · Benin — 2022 – 2024

CERTIFICATION & ACTIVITIES

- **Cisco Networking Academy**: Introduction to Cybersecurity, certificate earned (Oct 2026).
- **HackerLab 2026**, national CTF (Benin): team captain, role allocation and team training plan.
- **Self-study**: TryHackMe, OverTheWire Bandit, isolated Kali Linux lab (VirtualBox).

TECHNICAL SKILLS

Linux & systems: Ubuntu Server, SSH hardening, UFW, permissions/SGID/POSIX ACLs, Samba, GPG backups, cron and systemd timers, supervisord, Docker

Networking: VLAN/802.1Q, inter-VLAN routing, static/RIPv2/OSPF, VLSM, extended ACLs, port security, DHCP snooping, DAI, Cisco IOS (Packet Tracer)

Security: Incident investigation on Linux, log reading (auth.log, journalctl, last); fundamentals: Nmap, Wireshark, Kali Linux, Metasploit (lab)

Programming: Bash, Python, Rust (threads, async/Tokio), Git and GitHub

Languages: Idaasha (native) · French (fluent) · Mahi (fluent) · English (professional working proficiency)
